

Work puts students on path to a future

Yang Yujie and Xin Ran

FROM internships to employment, from campus to workplace, Jiading enterprises have opened their arms and provided positions and mentors to help college students grow rapidly.

Shanghai Cell Therapy Group Co Ltd is one of them.

"My greatest progress is to find out my working methods and plan my work rhythm reasonably," said management trainee Jing Changshuang.

A year after graduation, she has completed the transformation from a student to a worker.

Jing, a postgraduate student of Shanghai University, last March became an intern at the group which she thought had strong scientific research strength and rich platform resources.

Jing said she had learnt working methods and improved her professional quality and ability during the internship. Four months later, she became a full-time employee in the company.

Huang Wenhao, who also chose to work there, has become a human resources specialist.

He said the job offered him a good

opportunity to grow as he drafted talent development plans, implemented projects, made independent judgments and sought solutions to problems.

In the first half of this year, the company provided 80 internships for graduates, and more than half have been retained.

Gao Jitao, vice president of Shanghai Cell Therapy Group, said: "For enterprises, schools and students, this is a 'win-win' policy."

Gao was referring to the college students' practice base scheme, which he thought works as an incubator to train talent for the society and makes the connection between school education and employment more close, alleviating employment pressure to a certain extent.

"Next, we will make more effort promoting school-enterprise cooperation, creating favorable conditions for recruitment," Gao added.

Huang Ying, director of Jiading District Talent Service Center, said that at present, the center has received application from 44 companies and industrial parks to become a college students' practice base.

District college students' practice bases in 2022 will be finally confirmed after comprehensive assessment of the scale, development, teaching staff and other aspects of an enterprise," Huang said.

In one of the district's latest moves, Shanghai Jiading Talent Harbor was launched on July 8. Located on

Shuangdan Road in Jiading New City, the project's first phase comprises 10,000 square meters of buildings designated for various industries.

Under the district's plan, by 2025, the talent harbor will attract more than 100 enterprises with combined output exceeding 3 billion yuan (US\$444 million).

New charging station showing the power to succeed

Li Huacheng and Xin Ran

THE first new ChaoJi high-speed charging unit in Shanghai opened to the public at the Auto Expo Park in Jiading District on June 30.

The maximum output of the charging device is 360 kilowatts.

It can charge new-energy vehicles for a range of 400 kilometers in just 12 minutes.

The ChaoJi charger adopts the new generation of high-power charging technical standards jointly launched by the State Grid and a number of enterprises.

"This technology is developed to meet the market demand for high-power charging of electric vehicles with improvements being made in safety, power, structural design and future applications," said Bo Ji, head of the Anting station of the State Grid Shanghai Jiading power supply company.

While the future of ChaoJi charging technology is still full of uncertainties and needs to be further tested by the market and time, the majority of electric vehicle owners will be able to enjoy the convenience brought by this technology as the battery voltage level and the upper limit of charging current will be further increased due to technical improvements, thus leading to growing acceptance of ChaoJi charging standards by major car companies,

according to Bo.

The State Grid Shanghai Jiading power supply company took the lead in introducing super-charging applications such as power exchange technology and V2G (vehicle-to-grid) technology.

It assists in the operation of 775 State Grid charging piles in Jiading District and provides 12,000 kwh of electricity for vehicles every day.

As planned, the charging station where the new charging pile is installed

will be built into the first five-star demonstration site in Shanghai with upgraded standards for products, construction, operation and maintenance, as well as services.

Zhu Lin, senior project manager of the new-energy business department of the Shanghai International Automotive City (Group) Co Ltd, said the company will work closely with the State Grid to carry out the pilot test of super-charging piles and then accelerate their mass productions.

Restaurants reopen for dine-in services

Zhou Yulin and Xin Ran

CATERING businesses in Jiading District have resumed dine-in services.

More than 4,000 catering units applied for the resumption of dine-in services on June 29 alone, according to market regulator in the district.

Manager Zhu Zeng of a restaurant in Nanxiang InCity Mega said the restaurant strictly implemented pandemic prevention measures and kept the number of diners no more than half its maximum capacity.

There are 70 restaurants with indoor seats in the biggest mall in the district and 65 resumed dine-in on June 29. Hotels and snack bars across the district also restored dine-in service.

The market regulator and related government agencies said they will continue to strengthen the supervision and guidance of the pandemic prevention and control measures in the catering industry.
