

Faurecia opens hydrogen headquarters in Anting Town

Hu Xindong, Xu Yexin and Ye Fengting

FAURECIA (Shanghai) Hydrogen Investment Co Ltd, a subsidiary of the world's 7th-largest automotive technology supplier FORVIA, held its opening ceremony recently in Anting Town, Jiading District.

The company's operation marks a significant step for FORVIA in expanding its hydrogen energy business in China.

FORVIA's businesses cover six sectors, namely seating, interiors, electronics, clean mobility, lighting, and lifecycle solutions, all of which hold leading positions globally. In recent years, hydrogen energy has become the core business of FORVIA's carbon neutrality strategy.

Faurecia (Shanghai), serving as the regional headquarters of FORVIA's hydrogen business, focuses on the investment and production of on-board automotive hydrogen storage systems and hydrogen energy storage systems.

Dewu completes construction of Super Quality Assurance Center

Zhang Sichun and Ye Fengting

THE Super Quality Assurance Center of the Dewu app completed construction in Malu Town, Jiading District, on January 27.

Dewu is a major e-commerce platform targeting Chinese Millennials and Gen-Z. The nearly 120,000-square-meter operation center will provide inspection and authentication services for products ordered on the Dewu app, ensuring quality sales.

The project was honored with LEED Gold certification, the premier award in the green building industry.

Adopting the concept of a smart factory, the quality assurance center will establish a digital warehousing operation management system and an automated supply chain scheduling system. It will also be equipped with an independently developed warehouse information management system, as well as advanced TMS supply chain operation management, AQAE operating and AIoT p80 automatic photography systems.

These technologies will facilitate accurate verification and quality inspection of products.

The Jiading branch of the Shanghai Municipal Hospital of Traditional Chinese Medicine is scheduled to be fully operational by the year's end. — Yu Chao

Shanghai TCM Hospital starts a branch in Jiading

Yu Chao and Ye Fengting

THE Jiading branch of the Shanghai Municipal Hospital of Traditional Chinese Medicine officially opened on January 28 after three years of construction, becoming the third city-level hospital in Jiading.

Covering a land area of 69,126 square meters and a construction area of 112,582 square meters, the Jiading branch, one of the three campuses of the Shanghai Municipal Hospital of Traditional Chinese Medicine, operates all clinical departments as the main campus does.

Renowned TCM masters and

physicians, as well as experts with professional titles, will all be available for consultations at the Jiading campus.

"Jiading always prioritizes people's health, striving to build a public healthcare system that integrates TCM and Western medicine, with a focus on both infrastructure and services," said Lu Fangzhou, Jiading's Party secretary.

"We will promote the distinctive traditional Chinese medicine culture of Jiading, build a modern and international traditional Chinese medicine industry base, and allow more achievements in traditional Chinese medicine to benefit the public."

Established in 1954, the Shanghai Municipal Hospital of Traditional Chinese Medicine is a city-level comprehensive hospital integrating medical treatment, education, and scientific research, with more than 70 TCM experts.

The Jiading branch is poised to bolster its service capabilities, with the goal of having all beds, consultation rooms, and treatment rooms fully operational by year-end.

It will offer top-tier TCM services to residents in Jiading, Shanghai's northwest, and the broader Yangtze River Delta region, ensuring quality healthcare access.

EPINTEK in clinical research center deal

Li Huacheng and Ye Fengting

EPINTEK, a medical device technical service platform, is collaborating with Anting Town in Jiading District to establish a clinical research center and a large animal laboratory in Phase III of Anting International Medical Industry Park with an investment of around 70 million yuan (US\$9.7 million).

The initiative will explore and develop surgical robots, 3D printing and ultrasound therapy. It creates a closed-loop industrial ecosystem by connecting R&D, clinical practice and business.

The 25,000-square-meter Phase III of Anting International Medical Industry Park, set to begin operation

in 2025 with a maximum per mu output value of over 30 million yuan, is among the select projects in Jiading that are being expedited to cultivate "smart manufacturing hubs," fostering modernization and high-quality development.

The district government wants to integrate land resources to allow companies across the industry chain to operate in the same park or building, enhancing communication and work efficiency.

In Jiading, there are 31 projects clustered together under the "Industry Going Upstairs" initiative, including Phase II of Shanghai MedValley and the Nanxiang Precision Medicine Industrial Park.

Among the initial 31 projects, 23 belong to its "3+1" industries — the "new four modernizations" of the auto sector (electrification, IoT, intellectualization, and sharing); smart sensors and IoT; high-performance medical equipment and precision medicine; and the online new economy.

"We are set to create smart manufacturing hubs in key sectors by integrating them with urban renewal efforts.

"Our focus is on rejuvenating 2,500 to 3,000 mu of underutilized industrial land this year," said Zhang Jun, deputy director of the district's economic commission.
